

## Questions:

What is the framework you are using?

Can you explain the framework functionality? Deep dive.

Your role in your automation team.

Do you know robot framework?

Explain testNG xml structure.

How do you connect to a database in java

what are the different ways your database URL can be ? Apart from http://

is it mandate to close statement object in db. Code ?

Write code for db. Connection and walkthrough the code.

Can you explain about list interface.

usage of list interface (explained with select class).

Can you impose select by visible text / select by index methods on list interface  
reference created (continuation to above).

without those methods how do you select the dropdown values

Ans: (ls.get(index).click()) where ls is the get options() reference.

How do you select the 2nd select value from the dropdown (select by index)

how do you do parameterization in testNG.

Give an example for data provider.

Some questions on object class (can it have array type? Why? Etc)

How did you do parameterization in your framework

Why specifically jxl? Why not Apache poi.

What is the difference between jxl and Apache poi.

Can you write a sample code using jxl and walk through the code (they are very keen on the methods along with parameters and try to confuse us).

what type of reports you generate.

What are the ways in you can create your own customized html report (Ans: xml to html / directly in notepad)

Can you design a framework on your own and what would be your considerations ?

Comparing 2.45.0 jar and 2.46.0 jar what are the advanced features in 2.46.0?

One web element "India" (text) having same properties in all the builds. But the location of "India" keeps changing in each build. Write code to find "India" in every build and click on the checkbox next to it?

How will you verify the colour of the heading in a webpage is as expected (colour)?

There are multiple frames in a webpage. Say three frames one within another, how will you find an element in the inner most frame?

what is web element? Is it interface or class? Explain?

what is compile time and run time polymorphism?

One element is not identifiable in a webpage. Why it is not identifiable in a webpage? (Note: it is not an alert)

where will you have your locators in your framework?

how will you pass data without using 'send keys' method?

What are the methods available in an 'alert'?

How will you click on a button without using 'click' method? [keys. Enter not expected]

difference between interface and abstract class?

load a browser and go to google page

I have 100 test cases with me. How will you estimate?

How many scripts you will automate per day ? How many simple, medium, complex test cases?

why do you need a framework? What is the use?

have you used java executor?

have you created abstract class in your project?

"Driver. Find element(by.id)" - what is driver here? What is 'by' here?

what is the ide you are using? How will you get the jar files in it?

how will you read data from an excel? Write code and explain?

what is the folder structure of your framework? Explain?

How will you get all the links in a web table?

1. Explain all the oops concept with real-time example
2. Write a sample script in selenium for login pages with all coding standards
3. consider you have 200 test cases and it will take 4 hours to complete. After run 100 test cases got failed, so how do you rerun only the failed test cases ?
4. If you want to rerun the test exactly after the failure you need to call the method that failed. You can get that method name from its result object.

5. If you want to rerun all the failed test cases together, then you can give the testng-failed.xml as input xml after the first execution

1. Can you design a framework from scratch?

2. Given an application with 100-200 test cases and it is stable, what all would you consider for designing a framework and how would you start.

3. Explain your framework structure

4. How will you initiate your reports? (I told him about one line that we use to initialize extent reports). Is this one line enough to initiate the reports?

5. Draw a block diagram of how your framework looks like. (He then said no need as I was again going like framework folder structure)

6. How are your data sheets? In excel or any other format?

7. I have an excel data sheet with certain number of rows and columns. Can you write a code to read data from that and store it into any collection? (I used array list)

8. Why do you use list here? Why not anything else? Why not hash map?

9. If there are two elements in a web page (they have unique identifiers for themselves), one of them is underlined and other one is not. How will you identify the one that is underlined.

10. If I have a web page, when I click on a link in a web page, another page opens in a new window. Inside that window there is a frame that has another frame within it. Tell me the steps to get the text of an element inside the second frame (starting from first window)

11. What if I have to close the second window?

12. What is the difference between quit and close?
13. If I have any manually opened browsers, will quit close them?
14. Do you know the evolution of selenium? From selenium rc? Do you know selenium rc backed web driver concepts?
15. Why do you use maven? Have you worked with continuous integration?
16. When you give dependencies in the pom.xml, will maven check for the desired dependencies with your local system or with the internet?
17. What is pom? (Page object model). What is the difference between pom and the normal project models?
18. I have a home page, search page and results page. Do I need to create objects for each page to access the elements of the page?
19. If I'm not creating object for the search page how will I be able to access the elements of that page?
20. If my home page is not available, will I be able to move to the further pages?
21. What are the exceptions that you have come across?
22. How do you handle those exceptions?
23. Suppose in a page, when I click on a link, an alert might appear asking it to wait... Or it may not appear in some cases. How will you handle this situation?
24. Reverse the string cognizant without using reverse method()
25. Cognizant
  - 1) find the length of the string (length)

2) loop from length - 1 to 0 (for length-1 0)

3) get the character of the position - one at a time: right -> left (charAt(i))

4) concatenate the character (+ / concat)

5) print

26. Find out the most repeating character in the string cognizant

27. Find out the least repeating character in the string cognizant

28. Print diamond in the console

\*

\* \* \*

\* \* \* \*

\* \* \*

\*

29. Find the position of 2nd last character 'c' in the string "cognizant India development centre"

30. Write a java program to replace aeiou (with 1,2,3,4,5) in the given string "photon info tech"

1. tell me about the framework used in your project

2. how to read data from excel ?

3. how to handle multiple windows ?

4. testing annotations and arrange their structure

5. how to ignore test cases?

Java questions:

1. whether interface can have constructor ? Explanation reqd

2. how to access private data members from outside the class ?

3. Difference between hashmap and table ?

1) the interviewer asked how strong in selenium and java to rate myself from 0(least) to 5(strong), I answered selenium as 4 and java as 2.5/3.

2) difference between find elements and find element ? What is the error occurring if the locator is missing on both will it give error / null / exception for both

3) difference between array list and linked list?

4) what is maven? How we use maven in eclipse and where, what is the syntax in pom.xml? They are expecting the exact tag names in pom.xml.

5) what is testNG how we integrate testNG with selenium and how it is linked in pom.xml every time?

6) they given web table like below and asked the xpath relationship between them,

```
<tbody>
  <tr>
    <td> 1 </td>
    <td> 2 </td>
  <tr>
  <tr>
```

```
<td> 3 </td>
```

```
</tbody>
```

"In the above code tells me what is the relationship between 1st <td> with <tr>, what is the relationship between 1st <td> with <tbody> and

What is the relationship between the 1st <td> and 2nd <td> in xpath? - mainly they are expecting the terms used to call like siblings, predecessor / parent and ancestor...."

"7) why array list is faster than linked list? Since both are locating the index what is the difference? Only these 7 questions they asked me...."

Other questions asked for other candidates are as follows"

1) what is page object model project structure? And benefits over other frameworks?

2) what is testNG and give the annotations in order and parameters passed in order? He asked me 2 more questions related to testNG to me such as

8) what is the parameter to be used to execute the testcases repeatedly, and for thread count, thread pool size, max instance etc?

9) difference between depends on group and depends on method?

10) difference between priority and depends on methods with e.g.

11) if we give parameter as both priority=0 and depend son method=method1 which will be executed 1st?

3) given as scenario such as the web page with personal information and a submit button given

"Click on the submit button -> opens the new webpage in that we will see a button ""sign in"" and once clicked the username and password label

And text box displays and give credentials and click on login button our name displays on the same screen on top left corner -

Verify the text displaying in the position and navigate to the parent screen. In this webpage the close button / any other exit is not available.

how will you navigate back to its parent window after verifying?"

In xpath if there are no locators and no names or values present....write your own relative xpath ?

1.interviewer wrote testNG annotations in a paper and asked me the order it works

2.if @ test us removed what is the exception we get

3.what is pom in maven what is snapshot in pom.

4.difference between find element and elements

5.how to get the value of the underlined text inside the frame

6.do you know about maven and Jenkins? Why we use maven

7.write a code to read data from excel using data provider

8.what is setting .xml in maven

9.how does testNG works with maven group id and version in pom

10.what is artifact id

Qns asked in cts today :

Tech round 1

Tell about Ur prj

java - qns related to static, final, abstract, interface , exception handling

Selenium - frame handling, window handling, excel read write

Tech round 2

How you implemented automation in your project?

Explain your framework in detail

What difficulties faced and how you overcame them

How u did report of results

Round 3 - hr

Very general questions like talk about yourself, why you want to quit your current company, why you want to join cts etc

On the whole, nothing was asked outside of what we learnt in these 2 months

1) find the length of the string (length)

2) loop from length - 1 to 0 (for length-1 0)

3) get the character of the position - one at a time: right -> left (charAt(i))

4) concatenate the character (+ / concat)

5) print

2. Find out the most repeating character in the string cognizant
3. Find out the least repeating character in the string cognizant
4. Print diamond in the console

\*

\*

\*

\*

5. Find the position of 2nd last character 'c' in the string "cognizant India development centre"
  6. Write a java program to replace aeiou (with 1,2,3,4,5) in the given string "photon info tech"
1. What is implicit wait and explicit wait?
  2. Asked to write code to launch google page
  3. Asked to write syntax for relative xpath
  4. Asked to write xpath for visible text
  5. How to achieve data driven framework ?
  6. What is pom?
  7. What is testNG ?

8. Difference between @beforetest and @beforemethod

9. What is collection? List and set

10. Desired capabilities

11. There are 100 rows (i.e., <tr> tags) and each row has three test data ( <td> id</td>

<td>name</td>

<td>dept</td>

Here 20 rows have duplicate values for name value. How do you check it?

13. Difference between list and set

14. Interface

15. Difference between abstract class and interface

16. Why multiple inheritance not achieved by class?

17. Explain about your framework

18. Group execution

Technical round 2:

1. Explain about framework

2. How data driven is achieved?

3. What is class and package?

4. list few packages which you have used in selenium

5. What is class and object?

6. Can static variables /methods be override?

## 7. Few questions on my project

Questions that I have faced today in cts:

Round1:

- 1) tell abt yourself!!
- 2) rate yourself in java and selenium out of 5
- 3) tell abt your project architecture
- 4) design pattern of your project for a login page.
- 5) write a wrapper method for click function which should work for both string and a web element
- 6) what is object repository
- 7) suppose a list of 10 data with a common id=xyz, get text of all the web elements and print it.
- 8) continuation of above, I want only the 5th element and check whether it is string or not
- 9) what are different locators you have used in your project?
- 10) what is the relative xpath? And how many types of xpath are there??
- 11) what is annotation in testNG
- 12) how many annotations are there in testNG
- 13) if in a class extends super class there are four methods suppose  

```
@test {sysout ("1")}
```

```
@test {sysout ("2")}
```

```
@test {sysout ("3")}
```

```
@test {sysout ("4")}
```

And in super class

```
@before method {sysout("bm")}
```

```
@before test{sysout("bt")}
```

```
@before class {sysout("bc")}
```

```
@before suite{sysout("bs")}
```

What will be the output of the above

14) what is grid and tell the implementation

15) how jenkins will be useful

16) explain keyword driven model?

17) what is maven? How you have implemented in ur project?

18) in testNG how xml works??

19) how u ll run a suite level in xml?

20) what is an exception??

For this below code

```
If(findelementbyid("xxx").is displayed)
```

```
{  
Sysout("true");  
}  
Else {sysout("false");}
```

What will happen in the above code??

- 21) what will happen if web element not found in the above code?
- 22) when the exception will come in the above code? And when else block will be executed?
- 23) what are the exceptions you faced in project? And try catch
- 24) what is soap ui and service testing
- 25) where you executed sql in Ur project
- 26) what is function overloading and function overriding
- 27) what kind of role you want, coming executing two three test cases and going home or taking up new challenges and completing them??
- 28) do you know at mobile automation?

Round 2:

- 1)give brief intro abt yourself??
- 2) how you have implemented your project in testNG annotations!!
- 3) tell me how you have implemented maven projects and importance?

- 4) tell me abt Jenkins and implementation
- 5) tell abt wrapper classes and page object model how you implemented in methods
- 6) how you ll implement testNG in the page object model
- 7) where reports will store in pom
- 8) what is soap ui tool and soap ui pro tool?
- 9) tell me the implementation of the hub and node in grid, why we should go for the grid.
- 10) do you know abt mobile automation??

Hr round:

Why you wanted to switch the company??

Experience and relevant experience?

And package discussion!!

Cts questions which I faced:

Round 1:

1. Tell me about yourself. Relevant automation experience.
2. Have you used ide? What is ide? What is the use of ide.
3. Can you run your complete suite in ide.

4. Can you use chrome driver reference directly in your script ? Will it work? - this I answered how we used to do at test leaf. But said like we need to add chrome server reference something I was not sure.
5. What is maven. Why maven?
6. structure of pom.xml
7. In pom.xml I want to parameterize version how do you do that?
8. What is sure-fire? Why do we need it?
9. Pom model?
10. Constructors. Why do we need constructors? What's the use of it?
11. List a few web driver constructors?
12. Constructors with parameters?
14. About Jenkins
15. Overloading, overriding
16. There are 3 environments. Each has a text box with different label names to enter, but all locators and properties are same for all three. How to give input correctly for each text box and when you get an exception how to handle - code and show with try catch
17. TestNG xml is in one ip address. I want run in other 3 different machines with different ips how?
18. Tell some exceptions that you have faced.
19. What is stale element exception
20. Static and final

21. For final he asked to write code and asked me the out our when I change the final value and what exception will it throw?

22.some more have and selenium on the go while answering.

Round:2

1.windows, pop ups

2.upload file

3.pom model

4.if locators keep changing how do your mange?

5.some array related questions.

Round3:

1.challenges faced

2.their current project challenge and if I have a solution

3.about object. Properties

4. About git

5. About agile model

And some general discussion

1.use of get and set method in java

2.what is hash table

3.what is hash set

4.how to connect to db. write code

5. how to get a unique id from the string "id:9864 ". say multiple ways
6. what is interface
7. what is inheritance
8. what is abstract class
9. how to insert a data into an array
10. how to move to the tag which has no attributes. Write 2 ways
11. what is the framework used in your project
12. what are the different annotations used in testNG. explain in detail
13. explain the usage of Jenkins
14. how to move to the second value in dropdown without using any of the select command and click.
15. if the default select is in the last value of the dropdown and then how to use the action class.
16. write code for the below scenario  

In the first page on click of ok button it navigates to a frame and it is not a window. on that we have to select the first radio button and click next. this opens up another frame with same properties. do the same process again and after that it moves the next window on clicking next.
17. difference between throws and throw.
18. how to use regular expression
19. how to connect to excel
20. what is grid and explain in detail. How you used in your project.

1. What is the difference between selenium and qtp
2. What you meant by implicit wait
3. How many waits are there in selenium
4. What is the difference between implicit wait and explicit wait
5. How will you find elements
6. Write line of code for elements
7. In web page there is an element you don't know whether it appears or not. Now how you'll find that element also you have to catch that exception. Explain ?
8. What does data driven testing means
9. Do you aware of jdbc
10. How you'll connect to jdbc explain
11. If excel is input how will you connect to excel
12. What is the framework used in your project
13. Explain about pom
14. Is pom better or data driven better
15. What is hybrid framework
16. Project structure
17. What is object repository

18. What unit testing frame do you know
19. How you will write assert statement for comparing the difference between actual and expected login name
20. Difference between junit and testNG
21. What is sql
22. What do you know in oracle(since I said sql: structured query language and I know about oracle since it is subject in college so I learnt that)
23. How many joins that you are aware of.
24. Write select query, insert query.
25. What is constructor.
26. What is interface.
27. What is abstract class.
28. Difference between both
29. Explain about method overloading, method overriding concepts.
30. What is stlc
31. Write the life cycles of stlc
33. Scenario:
34. Do u have any agile knowledge
35. What is release backlog

36. What should be discussed in daily meeting

Tell about yourself

Why cognizant

Framework used

Draw pom structure and explain

Polymorphism program

Overloading and overriding

Hash map and hash table

Vector and array list

Implicit wait and explicit wait

Regression testing and retesting

Smoke testing and sanity testing

Round 2:

Project explanation

Agile

No of user stories per sprint

Complexity of user story

Sprint duration

Agile and waterfall

Defect tracking

Team size

Client interaction

Round 1:

1. What is selenium
2. Consider a web table having employee name and testing domain(manual or automation). Store these values . Then selected dropdown only if domain is automation ( write code)
3. Talk about current project
4. What are the challenges faced
5. What is the framework currently working and others few questions

Round 2:

1. Right click
2. Implicitly wait & explicitly wait
3. Fluently wait
4. Read from excel
5. Firefox profile
6. How will you handle proxy

1.have you worked in creating a framework from scratch ?

2.what are the frameworks you worked on other than testNG and pom

3.explain inheritance .and what is the use of extends ,when we can use the methods of other class by creating an object itself .

4.how, do you find broken links in a page and code for that

5.how to find the count of all links in a web page

6, a web element was removed in the previous release and now you need to verify whether the element is present or now. How will u do this ?

7.told to write xpath for a given example which uses following

Questions asked in f2f:-

1. Where you are currently working?
2. Talk about yourself?
3. How you shifted from manual to automated?
4. Which methodology your project follows?
5. What is agile methodology?
6. What are all phases in stlc?
7. Which phases you actually works?
8. Are you contributing in test planning phase?
9. About your organisation?
10. About your designation?
11. Which defect management you are using?
12. What are all the status in defect task?

13. What status you will set if you want to assign a defect to developer?
14. If defect still not fixed, who will have authority to move to next iteration?
15. In that case, which status you will set?
16. How you will get requirement
17. How you will analyse the requirement
18. Rate yourself in java?
19. What are all the features in java?
20. What are all the java features you are using in selenium?
21. Explain inheritance?
22. Explain encapsulation?
23. Explain overloading and overriding?
24. Explain polymorphism?
25. Explain abstract?
26. Explain interface?
27. Rate yourself in selenium?
28. what are all the annotations in testNG?
29. explain your framework?
30. explain hybrid framework?
31. what reports you are using to verify the results
32. how to read from excel
33. what repository you are using for handling files folders

34. if git, how you will add files to cloud
35. what situation that your files were not added but the coding is correct
36. When you will use git
37. Who will be the hub in your projects
38. What's the use of git
39. When you will run regression
40. What is verification and validation
41. How you will verify the title
42. What is assert and verify
43. Rate yourself in sql
44. How you will connect to the db.
45. Write a query to fetch the data
46. One webpage contains title, dropdown, submit button and alert. Write a code to verify title, select 3rd option in dropdown, click submit and once alert pops click ok.

How to locate an element that has no locators.

Types of xpath

Which is faster way of locating element

Which works faster between absolute and relative xpath

What is disadvantage we have in absolute xpath

What is maven

Explain maven life cycle

Methods in alert

How to handle alert with yes and no option

How to interact with web table

On clicking date field two-month calendar will be displayed (July and august) at a same time and date 4 will be enabled at this time and how will you handle this situation

Have experienced in testNG customized report

Wait method in selenium

Syntax for fluent wait and one exact example applicable for this wait method

Parallel execution through testNG

Explain about your project framework( I have explained about cucumber framework)

Write code for text box, combo box & input using xpath. (For input and combo box is available in web table).

Roles and responsibilities in automation

Data driven framework

Explain page object model with description.

Null pointer exception

Wait methods which is support by web driver.

Fluent wait and it's syntax

Java default class (abstract class).

Db connection

Git commands to push the code?

Array list vs list explanation with code

Dynamic web elements handling ( x path and some x path examples need to write)

Frames handling code and inline frame handling ?

Sql, jdbc connection for connection establishment code.

How to handle a dynamic web table

What does @test will do?

How to take a screen short with code

How to underline an element

Selenium code to highlight text, and get colour and back ground colour.

How to handle windows pop up ... Code using robot class.

How u achieved cross browser testing ?

Code to get the tomorrow's date as mentioned format (dd-mm-yyyy)

JavaScript executor code to click element

Difference between ant and maven

When to use excel as input and csv ? Why u have used ????

Webservices basics questions...

Invocation count and thread pool size in test ng?

Enumeration, iterator and list iterator difference

Random string generation and number generation.

Code to get the number of check boxes ?

CSS selectors types

String, string builder and string buffer difference

Multiple inheritance in interface example code

there are 1000 testcases in a test suite which has defect leakage. What strategy u will come up for the solution

What are the scenarios can be used to test Microsoft excel using selenium test scripts

Write code to validate/compare web page data and excel data

How do u do effort estimation

Which version control tool u r using. Tell me the process what u do

Whether client agreed for extent reports?

Have u been to scrum meetings. What u discuss in the meeting?

Any innovation things done in selenium?

Why you are using excel to fetch test data, it will take too much time and will create performance issue.

Have u worked on test plan and test strategy

How will you generate the failed testcase?

How will you get only the failed testcase screenshot?

First time button is enabled after some time button should be disabled, how will you verify it

How will you retrieve the values in HashMap

How will you do right click on the mouse

How will you verify the highlight element

I told JavaScript concept he asked other than that any think u have used he told it too have some drawback?

How to check the hidden element

Whether u have any idea database connection

Need to execute four different test environments ,how u will do it maven

What is the difference between assert and verify

Explain bdd frame work

4.how to establish database connection

Explain different xpath and types

Few scenario-based questions

Read and write the data from excel sheet

why is cucumber preferred

What exceptions u faced in cucumber

What are the keywords used in cucumber

How to handling alerts and hot to take screenshot of an alert

what type of reporting tool Ur using in Ur office and write a code for that

Use of Jenkins and how to schedule it

Write the java code to check prime no

Some questions on git hub, sql query to fetch employee with highest salary

Types of annotations and questions related to annotation and attributes. Some scenario-based questions

about project domain and application, I am working on with framework implementation.

Why Ur creating maven project and the use of maven project

How Jenkins is used in Ur office

More questions on cucumber framework, mandatory keyword

How do I convince customer on the selection of automation tool

Difference between pull and fetch command used in git.

What is wait, which is most preferred wait

What is page object model, what is the reason to prefer page object model

Diff between is displayed & is enabled

Write the drag and drop code

Rate Ur self in sql

How to do sorting using sql query

Cross browser testing

db. Connectivity code for db2...

Day to day responsibilities in your office

What are the challenges you face in Selenium. How to classify cases which can be automated or not

asked about why move from manual to automation

Write XPath. I have explained and written for relative XPath and again asked for absolute XPath for IRCTC login.

Some questions in Jenkins and GitHub.

Your roles & responsibility in your project

What kind of test cases will you automate

How many test cases will you execute in a day

How do we merge code when conflict occurs in Git

Apart from Java, what languages can be used in Jenkins tools

Why can't we use code directly in Jenkins without using Maven and GitHub

Scenario-based questions + team management

Client needs automation for the application and if you are going to meet the client and explain how to achieve and brief about the plan to the client.

You are working in sprint 2 but if you receive issues from the client in sprint 1 then how to handle

String str = "automation testing"; write a Java program to extract the consonants from the string

And print each letter with its occurrence?

How will you store the string "automation testing" with immutable and mutable types and explain it?

How will you print all the links in a web page

Round one : remove duplicate words in the given array

```
string str[]{"one","two","three","two"}
```

Reverse string program in multiple ways

How to perform right click operation using selenium

How to find any web element highlighted in the webpage

How to find all the links in the webpage

Framework explanation

Explain HashMap concept and where you are using hasp map in your project.

Explain overriding concept in your project

What is page factory ? Where are you using in your project

Explain about pom.xml

Will you use junit in your project? If yes explain about it?

How to pass multiple data to the scenarios in cucumber

How many git commands you know

Second round

Tell me about yourself.

Explain about your project

Explain about your framework

How you learnt about selenium (self-learn, online classes)

Why selenium, why not uft?

Failure moment in your life and how did you overcome?

Why cts ?

What is your dream job?

Suppose if we don't select you then how you will feel?

I will select you and I gave manual testing then what will you say?

How flexible you are in work?

Tell me about your strengths and weakness?

Hr round

Package discussion

Explain about long term and short-term goals

Preferred location

Questions from resume

Reason for leaving current job

Questions from my current organization

Which file must important in cucumber

I have 5 test cases but I need to run 3 tc how can you achieve this in cucumber

How can you find links in your don

String reverse program

Difference between assert and verify

How to retrieve value from data table

How to establish database connection

If the xpath does not work during runtime what are the other alternatives

How you implemented agile in our project

Explain about bdd framework

What are cucumber options did you know

What are cucumber keywords?

Explain your cucumber framework structure

Write the code for cucumber runner class

How will u perform double click functionality(actions)

in a webpage inside some data will be available in scrolling. How to see the data to scroll the inside page

What is the difference between / and // - in xpath (absolute and relative xpath)

String buffer and string builder difference ? (What is synchronized)

You need to verify the code review , what are the things you will check mandatory

How to synchronize the code

What is difference between verify and assert

What you know about synchronize wait

Why you choose cucumber in Ur project

I have 10 test case but I want to run only 3 how-to run-in cucumber ?

Write code for db. Connection

What method will u use for mouseover action

Write a program to take user name from excel and print salary data from excel

Write a program to print Fibonacci series

Explain jira workflow

Some of agile questions

What is role in team

Why your creating maven project

What is the use of pom.xml in testNG ?

Recent challenge u has faced in Ur framework?

Have u modified anything in Ur framework so far?

How will you find xpath for sample1 here 1 is dynamic 1,2,3

What are the challenges you faced while project in scripting

How will you handle error when it is due to error in scripts give some examples which you faced in your project

How will you debug your testcases and code

In how many ways u can find whether frames are present in a web page ?.

What are ways to move to a frame ?

What is implicit wait , explicit wait, and fluent wait... Write syntax for all.

Difference between final and finally ?

what is the collection ? Explain the types in detail ?

what is the use of new keyword and what will method overloading do ?

consider a string { mon, tue, wed }

And then using for each loop v r iterating and adding them in list. What will be the output if the array list is created outside the foreach and output if the array list is created inside foreach loop.

foreach and output if the array list is created inside foreach loop.

are there any possible ways to enter text without send keys.

consider u r using groups, there are groups like regression, sanity and functional. Now u need to run sanity group, sanity will be having 50 testcases, in that I want any 30 random testcases alone to run. What are the ways ?

What do you know about cross browser testing?

What is difference between link text and partial link text, in what scenarios, you will use partial link text ?

What is garbage collector

How will u clear the memory by optimising your code

When client wanted to execute the code in a machine which doesn't have any browser facility, then will you be able to execute the code through cross browser testing. If yes/no, explain ?

What do you know about listeners

What are desired capabilities?

Explain depends on methods

How you will run test cases in command prompt ?

How to will provide arguments data at run time ?

What exception you will get when no element when find elements path not found

What is @factory annotation in testNG.

What exception will come when depends on method failed

Suppose you have two methods how you will run two methods with same set of data using data provider

What is set property() ?

How you prioritize test cases

How to group test cases ?

What is web driver ? Why we need web driver ? Web driver is class or method or interface?

How you will handle if x-path is changing for specific web element?

What is locator id? What you will do when id is changing every time?

What is charat explain how it will work

What is the difference between @ before class and @before suit annotations

How to separate characters, numbers and special characters from given string ?

Print the star pattern in given scenario ?

Explain string ,string buffer and string builder ? Why string is immutable with proof it with example?

Can you extend methods in one interface to another interface?

What is synchronization in java?

Web driver driver = new i.e., driver (meaning for this line)
